

Disabling the new Google Chrome Print Preview function

1. Close your Google Chrome browser if it is open.
2. Right click on your Chrome shortcut
3. Go to Properties
4. Go to the "Shortcut" tab and in the Target field, go to the end of the file location and add:
" --disable-print-preview". There are 2 spaces before the "--" so make sure you include them as well. In addition, put this outside of the quotes if you have them. In this way, it should either look like:

a. C:\Users\[user name]\AppData\Local\Google\Chrome\Application\chrome.exe

--disable-print-preview

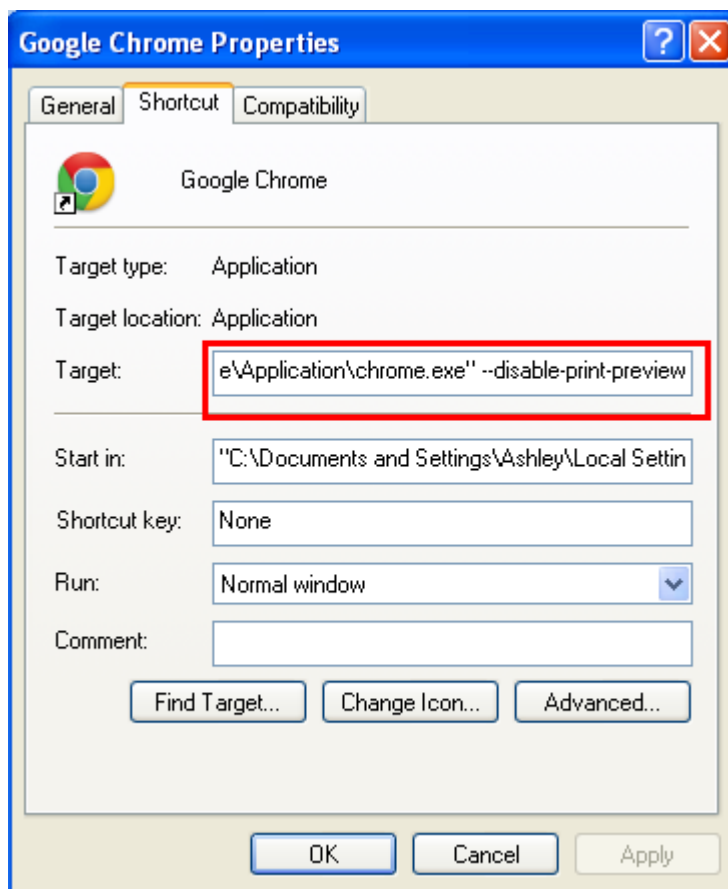

OR - if you have quotation marks

b. "C:\Users\[user

name]\AppData\Local\Google\Chrome\Application\chrome.exe"

--disable-print-preview

The above "Target" paths may vary depending on your computer setup.

5. Press OK.
